i-Tree Open Academy - Summer 2023

What:

Join us for the second round of our newest learning series! The i-Tree Open Academy will provide a broad introduction to the i-Tree suite of tools. This is a virtual opportunity for anyone interested in better understanding the benefits of trees and exploring the latest i-Tree has to offer. The Summer 2023 i-Tree Open Academy will cover the same material as in our [Spring 2023 Open Academy](#) with a few minor updates based on attendee feedback. There is no fee for the Academy, and we can accept the first 250 participants to each live session. Register by filling out the participant form.

This is our second attempt at an open format academy. Our intent is to help as many folks as possible get started working with i-Tree. Feel free to attend only the sessions you are interested in or view the recordings if you can't make the live session. We look forward to your engagement and feedback as we try to find new ways to connect with new audiences around the benefits of trees.

Who:

The intended audience is new i-Tree users or folks who haven't checked-in for a few years. The Academy will serve as a refresher and an introduction to the newest tools and features.

We will be offering continuing education credits (CEUs) for both the International Society of Arboriculture (ISA) and the New Jersey state Urban and Community Forestry program. One CEU is available for each of the live sessions attended.

How:

All sessions will be streamed live via this [Microsoft Teams link](#). All sessions will be recorded and posted below as well as on the i-Tree YouTube channel, so that you can catch up on anything you missed. There are no requirements for this course, and there will be self-directed exercises that you can use to gain experience using the tools. You are encouraged to submit any questions related to the course via info@itreetools.org, and there will be opportunities to ask questions during certain live sessions and office hours.

When:

Each session is one hour long and offered Wednesdays at 1:00 pm (Eastern US time). Note: Office hours days and times may vary.

- **August 2nd – Introduction to i-Tree**. Understand the basic science of i-Tree and the USFS research behind it. Explore the relationships between the i-Tree tools and the data they provide. Start to consider which i-Tree tools will be best for the application you have in mind.
 - Video recording
 - Presenter slides
 - Self-directed exercise - Session 1
 - Q&A
- **August 9th – Online with MyTree, i-Tree Design, and i-Tree Planting**. Explore the easiest to use online i-Tree tools for individual trees. Get a better sense of their advantages and most common uses.

The trees around you:
remove hazardous pollutants from the air you breathe, absorb carbon dioxide from the air to store as wood, and control storm water by intercepting and absorbing rainfall.

Trees provide more than just beauty and shade.

They work hard for all of us, every day!
Click here to learn more.

Tools for assessing individual trees

- MyTree**
Are you new to i-Tree? Start with our EASIEST tool! MyTree helps you quickly assess individual trees with a minimum of fuss. *via your web browser or Android / Apple devices; Learn How to use it!*
- i-Tree Design**
A full-featured web tool with expanded building interactions and forecasting for estimating the benefits of individual trees. *via your web browser; Learn How to use it!*
- i-Tree Eco**
Eco is our flagship tool that accommodates tree inventory IMPORT or field data evaluation to derive individual tree benefit estimates. *requires installation on a Windows PC; Learn How to use it!*

Tree canopy area assessment tools

- Our Trees**
Beta release! Quick tree canopy and related information for your community within the continental US! *via your web browser or Android / Apple devices*
- i-Tree Landscape**
US tree canopy and Census maps/data at your fingertips! Identify priority planning & protection areas for climate & social issues. *via your web browser; Learn How to use it!*
- i-Tree Canopy**
From your chair, easily estimate land cover and tree canopy plus benefits using random point sampling on aerial imagery. *via your web browser; Learn How to use it!*

More tools...

i-Tree is for everyone.

These are free tools and free support for students of all levels, homeowners, community advocates, sustainability officers, urban foresters, and more!

i-Tree Tools Resource Guide

This guide is intended to help new and experienced users to find the tools, guides, and other resources on the i-Tree Website that you need to help make your project a success.

Find the tools

The core tools are all available directly on the homepage www.itreetools.org. This includes the tree assessment tools, [MyTree](#) and [i-Tree Design](#) as well as the canopy assessment tools [i-Tree Canopy](#) and [i-Tree Landscape](#). Beyond these web-based tools, you can also learn more about i-Tree Eco from the homepage or head directly to the [downloads](#) page to request your download link. For additional tools like [i-Tree Species](#) and [i-Tree Planting](#) visit the [All Tools](#) page.

Learn to use the tools (for most of the web-based tools go to Menu>Help to find the "How to use" guide)

[Video walkthroughs](#) – Start by checking our learning videos to see if we have any videos to help you get started or complete specific tasks. You can also head to our [YouTube channel](#) for even more videos, including recorded webinars and presentations.

[Manuals, Guides, and Workbooks](#) – This page includes manuals for individual tools along with guides and workbooks to help you complete specific tasks like post-stratifying your i-Tree Eco project or looking up synonym species in the i-Tree database. Similar documentation in other languages can be found [here](#).

[Teaching with the tools](#) – We have a collection of curricula and teaching resources created by the i-Tree team and others.

See how others have used the tools

[User's reports](#) – Reports shared with the i-Tree team from a variety of different applications of the i-Tree tools. Additional international reports in a variety of languages can be found [here](#).

[Project profiles](#) – For selected user's projects we have a deeper dive into how the project was used to change community perceptions and/or influence management strategies.

Understand the science of i-Tree

[Understanding i-Tree](#) – This document is the starting point for all explorations of the science underlying the i-Tree models and estimates. It provides summary descriptions of all model workings and links to peer reviewed publications for additional details.

[Methods documentation](#) – A collection of many of the publications, white papers, and data sources representing the science of i-Tree, broken down by tool and topic.

[Software](#) and [Science](#) change logs – The i-Tree tools are continually updated with the latest research. Sometimes, the software is updated before the documentation can be added to the website. Check out the software and science change logs for the latest changes.

For international i-Tree users

[International use](#) – Find information about the use of i-Tree outside the US. You can also find [reports](#) shared by international users and available [translated documentation](#) linked at the bottom of that page.

Get support

Email us – If you can't find the answers to your questions on the i-Tree website you can always reach our support team by emailing info@itreetools.org.

[Feedback form](#) – Use the feedback form if you have suggestions on how to improve the tools or if you would like to share your own project on the i-Tree website.

[User's Forum and FAQs](#) – If you have a question others could benefit from, or you think you may have stumbled across a common problem, feel free to post to or search the forum.

Percent building cover														
Ground cover composition														

METHODS, ADVANTAGES, AND LIMITATIONS

The premise behind i-Tree is shown in Figure 11. Structure is the basic information on the physical forest resource (e.g., number of trees, species composition, tree sizes and locations, leaf area, etc.). The attributes are directly measured by users or estimated (e.g., leaf area) by i-Tree based on direct measures of structure. From the structure data, along with local environmental data (e.g., weather data), various tree functions (e.g., gas exchange, tree growth) are estimated. These functions are then converted to various services (e.g., pollution removal) based on other local data (e.g., pollution concentrations). These services are then converted to benefits (e.g., cleaner air, impacts on human health) based on other data (e.g., local atmospheric conditions, human population data). Finally, the benefits are converted to values based on various economic procedures.

Forest management objectives often seek to improve environmental or human health, or the value of the forests. Forest managers do not directly manage functions or values, rather they manage forest structure (i.e., plant and remove trees, protect existing forests, and select species and locations) to optimize services and values. However, managers are not the only force influencing forest structure. The existing forest and the environment have a substantial influence on forest structure through natural regeneration, tree growth and mortality, storms, insects and diseases, invasive plants, and other factors. Included in this environmental influence are unintended consequences of human actions and development (e.g., introduction of exotic plants, insects and diseases, increased air temperatures and pollution, climate change, etc.). People and nature act to alter forest structure and consequently forest services and values.

Figure 11.—Diagram showing basic i-Tree process.

Video Learning

i-Tree Introduction Series Videos

This (4) part video series was developed to introduce i-Tree to Master Gardeners, volunteers or anyone interested in learning how to use i-Tree for community projects. *(Note these videos refer to older versions of i-Tree applications)*

1. i-Tree Suite & tree benefit introduction - 16 min. - This presentation introduces the i-Tree suite of tools and community tree benefit concepts.
2. i-Tree Design intro and walkthrough - 30 min. - This video demonstrates Design and provides examples of how Design can be used for various community projects.
3. i-Tree Canopy intro and walkthrough - 22 min. - This video explores i-Tree Canopy's capability to estimate canopy cover and associated tree benefits.

i-Tree Download and Basic Desktop Installation

1. Steps for downloading and installing i-Tree desktop software - 13 min **Updated Nov2020**. - This was developed for Eco v6 use and includes system requirements overview.
2. Registration, software download and desktop installation - 13 min. - This is an older screencast for workshop participants demonstrating registration, software download and installation steps.
3. Options for installing and running i-Tree on a Mac computer - 4 min.- This video discusses non-supported options such as using Bootcamp or Parallels to run the Windows-based i-Tree software on a Mac computer.

i-Tree Tool Videos

i-Tree Eco v6

Eco Basics, Project Creation and External Import Steps

1. Eco v6 highlights and overview - 5 min. - video highlights features and options in the i-Tree Eco v6 application.
2. Importing external inventory data into Eco v6 - 8 min. - Instructions for setting up an Eco v6 inventory project and importing in external data.
3. Eco v6 sample project creation - 8 min. - Creating a plot-based sample project using the i-Tree Eco v6 application.
4. Eco v6 complete inventory project creation - 11 min. - Creating a complete inventory project using the i-Tree Eco v6 application.
5. Converting Eco v5 to v6 project - 6 min. - How to update an existing Eco v5 legacy project to use in Eco v6.

About

Display results for: All Trees

Overall Benefits Stormwater Energy Air Quality Carbon Dioxide

In 40 years, these trees will conserve 3,832.9 Kilowatt-hours of electricity and reduce consumption of heating fuel by 320 therms that year.

Trees modify climate and conserve building energy use in three principal ways:

- Shading reduces the amount of heat absorbed and stored by buildings.
- Evapotranspiration of moisture by foliage reduces air temperatures.
- Trees slow down winds thereby reducing the amount of heat lost from a home.

Strategically placed trees can increase home energy efficiency. In summer, trees shading east and west walls generally keep buildings cooler. In winter, allowing the sun to strike the southern side of a building can warm interior spaces.

Unexpected results may include the following:

- A tree may produce negative energy savings due to an increase in winter heating costs. For example, if southern walls are shaded by dense evergreen trees there may be a resultant increase in winter heating costs.

Map Satellite

Google

- A building that is neither heated nor air conditioned will have no associated energy benefits.
- A tree that is too small or located too far from a structure may have no energy benefits.
- A tree may have an energy effect even if it is located outside of the illustrated colored benefit zones, as wind break effects can occur at significant distances from a structure.
- When two or more tree crowns overlap the total energy savings are adjusted so that benefits are not double-counted in the overlap area.

The screenshot shows the i-Tree Design v7.0 web application interface. At the top, there is a navigation bar with the i-Tree logo, the text "i-Tree Design v7.0", and links for "Home", "Project", "Menu", "i-Tree", and "Feedback".

i-Tree Design v7.0*

i-Tree Design allows anyone to make a simple estimation of the benefits provided by individual trees. With inputs of location, species, tree size, and condition, users will receive an understanding of tree benefits related to greenhouse gas mitigation, air quality improvements, and stormwater interception. With the additional step of drawing a building footprint – and virtually “planting” or placing a tree – tree effects on building energy use can be evaluated.

Tree benefits are estimated for (a) the current year, (b) a user-specified forecast year sometime in the future, (c) the projected total benefits across that future timespan, and (d) the total benefits provided to date (based on estimated tree age). Multiple trees and buildings can be added to compare benefits or to provide a full accounting of a property’s trees.

This tool is intended as a simple and accessible starting point for understanding the value of individual trees or a small population of trees to a community. For more detailed information on urban and community forest assessments, please explore more of the [i-Tree](#) website. To learn more about the i-Tree Design model, click [here](#).
