

i-Tree Newsletter—February 2006

i-Tree Website Updated

The i-Tree website (www.itreetools.org) has been updated! In addition to other changes, now available are links to i-Tree [Support](#), [Frequently Asked Questions](#), the [Resource/Learning Center](#), and [Quick Links](#).

In the Resource/Learning Center, you can find out how you and your community can benefit from conducting an i-Tree assessment, sign-up for a training workshop, view i-Tree presentations, and find links to technical papers. Our new support system allows you to view frequently asked questions, ask us a question, and create a personalized i-Tree knowledge center. Quick Links provide you with the ability to directly find information on specific i-Tree tools or cooperators.

i-Tree Webcast Success

On Jan 10th, 2006, Federal U&CF Coordinators, U&CF State Coordinators and U&CF State Volunteer Coordinators participated in an i-Tree informational webcast. The goal was to provide an overview of the i-Tree suite of inventory and assessment tools using a convenient, cost-effective method that can be accessed by a wide geographic audience. The success of this presentation has paved the way for future webcasts that will reach broader audiences. Stay tuned for announcements of future webcast presentations...

View the Power Point version of the webcast by [clicking here](#).

i-Tree Training Workshops

Space is still available!

Three workshops are currently scheduled for 2006:

- [Southern i-Tree Workshop](#)—Clemson, SC, March 21-22
- [Western i-Tree Workshop](#)—Golden, CO, May 17-18
- [Midwest i-Tree Workshop](#)—Minneapolis, MN, November 14-17

i-Tree Release Date

The official release of the i-Tree suite of software tools is scheduled for Summer 2006.

Workshop overview: A training-of-the-trainers approach will provide participants with the expertise, familiarity, and tools to present, encourage and manage i-Tree's use in the communities they serve. During this hands-on workshop, users will gain experience in working with the software and conducting an i-Tree analysis start-to-finish—from inventory to data analysis to reporting results. Presentation and advocacy tools will be demonstrated that participants can use to promote i-Tree use among their own constituents.

Who should attend?: This 2-day workshop is designed for state, regional and volunteer urban & community foresters, extension foresters, or local urban forestry leaders (e.g., municipal, non-profit, or consulting urban foresters) who want to be involved with the dissemination and use of i-Tree. Participants should have 1) the ability and desire to conduct further i-Tree outreach and training, or 2) the ability and desire to use and provide feedback on i-Tree components utilized at the local level.
