What Is i-Tree?

What is i-Tree? i-Tree was developed by the USDA Forest Service Research. It is a state-of-the-art, peer-reviewed FREE computer software suite containing urban forest inventory and analysis tools. i-Tree tools help communities assess and care for their neighborhood trees and forests that improve our health, well-being, and the environment. Reports and information generated by i-Tree will help raise awareness about the benefits of trees and forests, not just as amenities, but as an integral and essential part of the neighborhoods we call home.

FUFC will be hosting three, two-day regional i-Tree training workshops. These training workshops will focus on providing attendees with the ability to utilize the various i-Tree applications listed below to quantify the value of the trees in their community.

- i-Tree Species
- i-Tree MyTree
- i-Tree Design
- i-Tree Canopy
- i-Tree Landscape
- i-Tree Streets
- i-Tree Eco

The workshops will include hands-on exercises to help attendees feel more comfortable utilizing each application.

Instructors

Charlie Marcus
Charlie received his BS from SUNY College of Environmental Science and Forestry and is an ISA Certified Arborist. He provides urban forestry services for both public and private clients. Previously, he worked for the Florida Forest Service for 35 years in the management of trees and was the Urban Forestry Programs Coordinator for 10 years. Charlie currently works out of the Tallahassee area for Legacy Arborist Services.

Caroline Hament
Caroline has a degree in urban forestry from the University of Florida. She recently was on a team that conducted an urban forest inventory and analysis in Gainesville. Currently she works for the City of Gainesville on their natural resource management team.

Deb Hilbert
Deb Hilbert is a biological scientist for the UF/IFAS Urban Trees and Landscape Management Lab where she helps conduct research related to urban forestry, arboriculture, environmental horticulture, and urban landscape sustainability. She is also pursuing her Ph.D. in Environmental Horticulture at UF, focusing on the performance of underutilized trees in Central Florida cities and strategies for urban forest diversity management. She and her labmates have been using i-Tree ECO in Tampa to collect data for the City's long-term Urban Ecological Assessment.
