

i-Tree International Academy: Session 5 – January 22, 2025

Homework Assignment: Collecting Data with i-Tree Eco

Option 1: Easy

Use the data entry link we used in session 5 (<https://bit.ly/AcademyTreeData>) to enter data for more trees. Try to enter at least five trees and explore how it works on a mobile device when you are in the field.

Option 2: More Challenging

Using your project from last week's homework enter data for a few trees directly in Eco. Also try using the mobile data collection option. You can even share your link with family and friends to show them how to collect data. Share your project with data entered as a .zip file emailed to info@itreetols.org.

Please try both options if you have time.

Refer to the one page [field data sheet](#), the larger i-Tree Eco [field manual](#), or our YouTube tree measurement [playlist](#) for details on measuring the different variables. If you do not have all the necessary equipment to complete the tree measurements, that is okay. Do your best to accurately collect the data. Part of a pilot project is to help evaluate what tools you may need for a larger project.

Tell us how the data collection process goes and send questions to info@itreetols.org.
