

Change Analysis of Canopy Cover in La Crosse, Indiana

More small communities are beginning to reach out to the Indiana Department of Natural Resources (IDNR) Community and Urban Forestry (CUF) program for first time assistance. The urban forests in these communities have often never been managed or are infrequently managed when resources allow. Communities just starting to research how to manage their urban forest resource can feel overwhelmed by the lack of specific information they possess about their trees. As many of these communities have no designated staff, budget, or other resources for their trees it makes establishing a management plan more of a challenge. Canopy cover assessments using i-Tree Canopy are a free and relatively quick and easy way to provide new communities a starting point in their management journey.

LaPorte County is located in the northwest region of Indiana.

Brief Background La Crosse

La Crosse is a rural town located in the southwest portion of LaPorte County. According to the US Census Bureau, it had an estimated population of 531 people in 2018 and covers approximately half of a square mile of land.

Cover Class Selection

The format and description of the seven default cover classes were slightly modified. The biggest adjustment was the addition of the *Ag Field* cover class. La Crosse is a rural community and a quick visual assessment showed that agricultural fields are an abundant land use. It seemed worthwhile to separate it out from *Grass/Herbaceous* (or *Soil/Bare Ground* depending on the timing of the aerial images).

Abbr.	Cover Class	Description
T	Tree/Shrub	anything that looks like a tree
H	Grass/Herbaceous	anything herbaceous that's not a tree or shrub
B	Impervious Buildings	impervious footprints of buildings
R	Roads	roads made of concrete, blacktop, gravel, etc.
I	Impervious Other	parking lots, sidewalks, and any other impervious surface that's not a road or building
W	Water	standing water
S	Soil/Bare Ground	miscellaneous pervious surfaces
A	Ag Field	either bare soil or herbaceous cover that is part of an agricultural field

Change Comparison Method

A canopy assessment was completed using 400 points. The newest available aerial imagery of La Crosse utilized in i-Tree Canopy was from April 22, 2017. The survey points were then uploaded into Google Earth Pro and the historical imagery feature was used to conduct the change analysis survey. Imagery from February 28, 2005 was selected as it was the oldest data with the highest resolution to ease the comparison process. This timeframe was expected to capture some of the aftereffects of emerald ash borer.

The 400 points from 2017 and their respective cover class abbreviations were input into an Excel spreadsheet. The cells were conditionally formatted to match their corresponding color used in i-Tree Canopy. Analysis began in Google Earth Pro by zooming into the northwest corner and recording the cover class in the spreadsheet for each visible point. Once all points were recorded the view was moved to new points. The survey was completed in a west to east and north to south grid. Any individual points missed in this method were found by clicking on the desired number in i-Tree Canopy so it zoomed into the point and gave a general idea of where it was on the map. For points that did change cover class, an observational cause was also noted.

Change Analysis

Overall, 57 points showed a change in cover class from 2005 to 2017. The *Tree/Shrub*, *Grass/Herbaceous*, *Impervious Buildings*, and *Impervious Other* all showed net gains while *Ag Field* had a net loss. There was a net gain of two points classified as canopy.

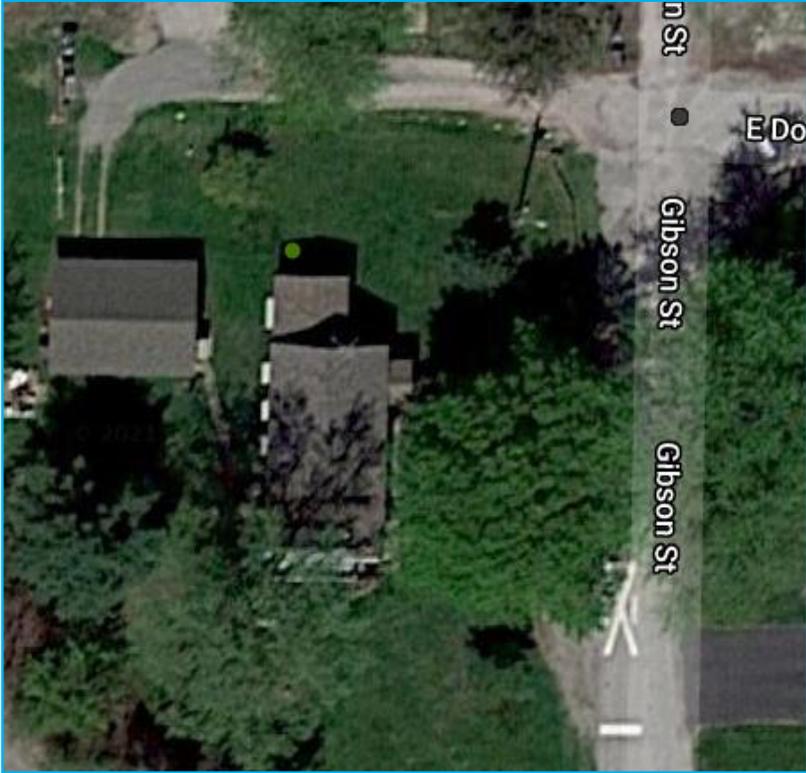

Almost all the *Tree/Shrub* gains in 2017 appear to be from growth of existing trees, and not the planting of new trees. Only one *Tree/Shrub* loss seemed to be the apparent result of a construction project, while a handful of others seem to be from fencerow clearing. All trees were completely removed, so cause can only be inferred.

Cover Class		2005	2017	NET CHANGE
Tree/Shrub	T	64	66	2
Grass/Herbaceous	H	126	129	3
Impervious Buildings	B	20	21	1
Roads	R	31	31	0
Impervious Other	I	18	19	1
Water	W	0	0	0
Soil/Bare Ground	S	29	29	0
Ag Field	A	112	105	-7
TOTAL		400	400	57

Net Change

2005	2017	# Change

A	H	6

Total Change

An example of a point changing cover class.

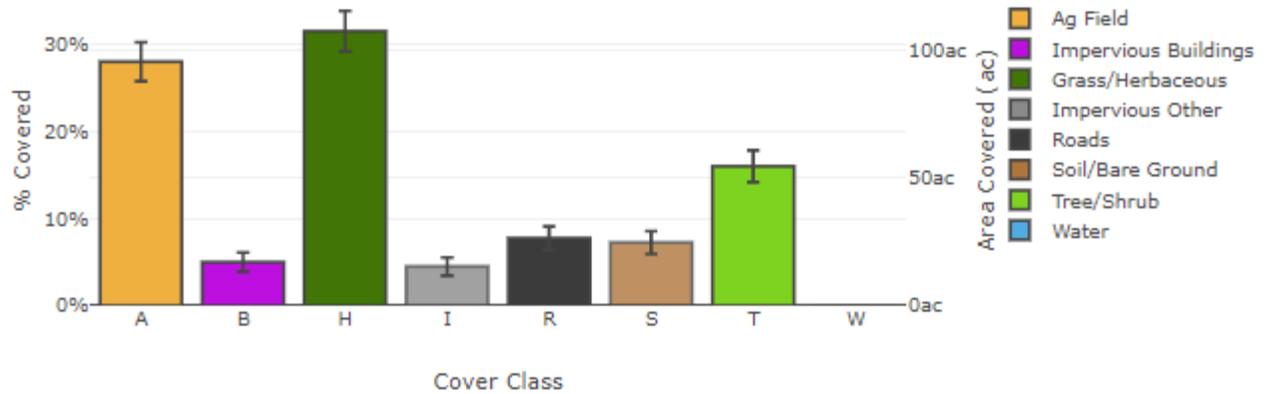

ABOVE Point 112 was classified as Grass/Herbaceous in the original i-Tree Canopy assessment using the 2017 aerial imagery.

BELOW The historical imagery analysis used in Google Earth Pro showed there used to be a tree in the same spot in 2005.

i-Tree Canopy Analysis

Land Cover

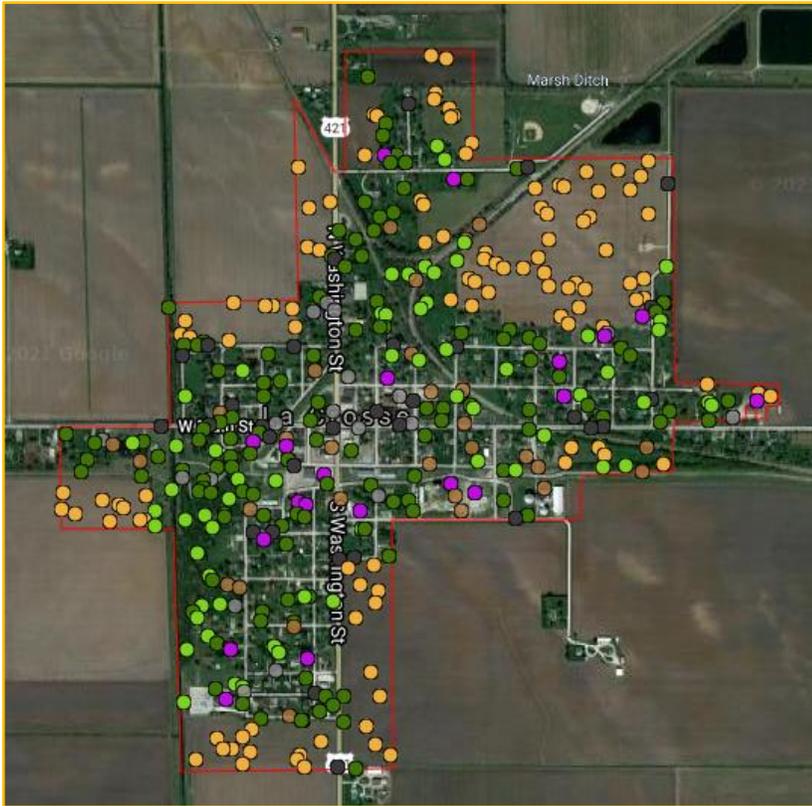

This is the graph from the 2017 analysis, but the changes in cover class were so minute that at this scale there wasn't really an observable difference between the two graphs so only one was included.

Abbr.	Cover Class	Description	Points	% Cover ± SE	Area (ac) ± SE
A	Ag Field	either bare soil or herbaceous cover that is part of an agricultural field	112	28.00 ± 2.24	95.24 ± 7.64
B	Impervious Buildings	impervious footprints of buildings	20	5.00 ± 1.09	17.01 ± 3.71
H	Grass/Herbaceous	anything herbaceous that's not a tree or shrub	126	31.50 ± 2.32	107.14 ± 7.90
I	Impervious Other	parking lots, sidewalks, and any other impervious surface that's not a road or building	18	4.50 ± 1.04	15.31 ± 3.53
R	Roads	roads made of concrete, blacktop, gravel, etc.	31	7.75 ± 1.34	26.36 ± 4.55
S	Soil/Bare Ground	miscellaneous pervious surfaces	29	7.25 ± 1.30	24.66 ± 4.41
T	Tree/Shrub	anything that looks like a tree	64	16.00 ± 1.83	54.42 ± 6.23
W	Water	standing water	0	0.00 ± 0.00	0.00 ± 0.00
Total			400	100.00	340.14

Tree Benefit Estimates: Carbon (English units)

Description	Carbon (T)	±SE	CO ₂ Equiv. (T)	±SE	Value (USD)	±SE
Sequestered annually in trees	60.69	±6.95	222.54	±25.50	\$10,351	±1,186
Stored in trees (Note: this benefit is not an annual rate)	1,865.67	±213.74	6,840.80	±783.71	\$318,192	±36,453

Currency is in USD and rounded. Standard errors of removal and benefit amounts are based on standard errors of sampled and classified points. Amount sequestered is based on 1.115 T of Carbon, or 4.089 T of CO₂, per ac/yr and rounded. Amount stored is based on 34.281 T of Carbon, or 125.697 T of CO₂, per ac and rounded. Value (USD) is based on \$170.55/T of Carbon, or \$46.51/T of CO₂ and rounded. (English units: T = tons (2,000 pounds), ac = acres)

2005

Tree Benefit Estimates: Carbon (English units)

Description	Carbon (T)	±SE	CO ₂ Equiv. (T)	±SE	Value (USD)	±SE
Sequestered annually in trees	62.59	±7.04	229.50	±25.81	\$10,675	±1,201
Stored in trees (Note: this benefit is not an annual rate)	1,923.98	±216.41	7,054.58	±793.49	\$328,136	±36,908

Currency is in USD and rounded. Standard errors of removal and benefit amounts are based on standard errors of sampled and classified points. Amount sequestered is based on 1.115 T of Carbon, or 4.089 T of CO₂, per ac/yr and rounded. Amount stored is based on 34.281 T of Carbon, or 125.697 T of CO₂, per ac and rounded. Value (USD) is based on \$170.55/T of Carbon, or \$46.51/T of CO₂ and rounded. (English units: T = tons (2,000 pounds), ac = acres)

2017

Tree Benefit Estimates: Air Pollution (English units)

Abbr.	Description	Amount (lb)	±SE	Value (USD)	±SE
CO	Carbon Monoxide removed annually	156.12	±17.89	\$2	±0
NO2	Nitrogen Dioxide removed annually	445.05	±50.99	\$4	±1
O3	Ozone removed annually	2,326.04	±266.48	\$193	±22
SO2	Sulfur Dioxide removed annually	176.16	±20.18	\$1	±0
PM2.5	Particulate Matter less than 2.5 microns removed annually	139.26	±15.95	\$440	±50
PM10*	Particulate Matter greater than 2.5 microns and less than 10 microns removed annually	957.13	±109.65	\$55	±6
Total		4,199.76	±481.14	\$694	±80

Currency is in USD and rounded. Standard errors of removal and benefit amounts are based on standard errors of sampled and classified points. Air Pollution Estimates are based on these values in lb/ac/yr @ \$/lb/yr and rounded: CO 2.869 @ \$0.01 | NO2 8.178 @ \$0.01 | O3 42.740 @ \$0.08 | SO2 3.237 @ \$0.00 | PM2.5 2.559 @ \$3.16 | PM10* 17.587 @ \$0.06 (English units: lb = pounds, ac = acres)

2005

Tree Benefit Estimates: Air Pollution (English units)

Abbr.	Description	Amount (lb)	±SE	Value (USD)	±SE
CO	Carbon Monoxide removed annually	161.00	±18.11	\$2	±0
NO2	Nitrogen Dioxide removed annually	458.96	±51.62	\$5	±1
O3	Ozone removed annually	2,398.73	±269.81	\$199	±22
SO2	Sulfur Dioxide removed annually	181.67	±20.43	\$1	±0
PM2.5	Particulate Matter less than 2.5 microns removed annually	143.61	±16.15	\$453	±51
PM10*	Particulate Matter greater than 2.5 microns and less than 10 microns removed annually	987.04	±111.02	\$56	±6
Total		4,331.00	±487.15	\$716	±81

Currency is in USD and rounded. Standard errors of removal and benefit amounts are based on standard errors of sampled and classified points. Air Pollution Estimates are based on these values in lb/ac/yr @ \$/lb/yr and rounded: CO 2.869 @ \$0.01 | NO2 8.178 @ \$0.01 | O3 42.740 @ \$0.08 | SO2 3.237 @ \$0.00 | PM2.5 2.559 @ \$3.16 | PM10* 17.587 @ \$0.06 (English units: lb = pounds, ac = acres)

2017

Tree Benefit Estimates: Hydrological (English units)

Abbr.	Benefit	Amount (Kgal)	±SE	Value (USD)	±SE
AVRO	Avoided Runoff	67.09	±7.69	\$600	±69
E	Evaporation	4,525.62	±518.47	N/A	N/A
I	Interception	4,526.30	±518.55	N/A	N/A
T	Transpiration	6,407.97	±734.13	N/A	N/A
PE	Potential Evaporation	30,260.37	±3,466.76	N/A	N/A
PET	Potential Evapotranspiration	22,395.90	±2,565.77	N/A	N/A

Currency is in USD and rounded. Standard errors of removal and benefit amounts are based on standard errors of sampled and classified points. Hydrological Estimates are based on these values in Kgal/ac/yr @ \$/Kgal/yr and rounded:

AVRO 1.233 @ \$8.94 | E 83.157 @ N/A | I 83.169 @ N/A | T 117.744 @ N/A | PE 556.024 @ N/A | PET 411.517 @ N/A (English units: Kgal = thousands of gallons, ac = acres)

2005
